PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/783,856	Applicant(s) BADT ET AL.	
	Examiner Helene Rose	Art Unit 2163	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 April 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-30 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-30 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 20 February 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2163

Detailed Action

1. In response to communication filed on 4/9/2007, Claims 1, 11, and 21 have been amended. No claims have been cancelled or added. Therefore Claims 1-30 is pending.
2. Applicant's arguments with respect to claim to the rejected claims have been considered but are moot in view of the new ground(s) of rejection.

Specification

3. In view of the specification being objected to because of the following informality, wherein on page 3 of the specification, paragraph [0005], cited the term "Inasmuch".

Examiner **withdraws** the pending rejection based on applicant remarks on page 9 as well as referring to dictionary.com for a reference.

Claim Rejections – 35 U.S.C – 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-30 are rejected under 35 U.S.C. 102(e) as being anticipated by Johnston-Watt et al (US Publication No. 2003/0115311, Date Filed: November 27, 2002).

Claims 1, 11 and 21:

Claims 1, 11 and 21 disclose a provisioning system, a service provisioning system, and a system for provisioning presence utilizing the same functionality.

Johnston-Watt teaches a provisioning system, a service provisioning system, and a system for provisioning presence, comprising:

an ontology depository having at least one domain-specific ontology model **accessible via the internet** for a particular presence application (paragraph [0050] and [0051] and paragraph [0052], wherein the ATF supports protocols with the emerging web services and so forth, wherein emerging web services is equivalent to the internet, in which a web service is any piece of software that makes itself available over the internet and uses a standardized XML messaging system, respectively, Johnston-Watt) ; and

a presence entity having a structure operable to reference a domain-specific ontology model of said ontology depository **via the internet** for customizing a presence client software module associated with said presence entity, whereby said presence entity becomes operable to engage in a particular presence application relating to said domain-specific ontology model (paragraph [0059], wherein it modifies the content for delivery to the mobile device based on information from the user's profile and business rules defined in the business domain ontology that is applicable for the user's place, time and role, wherein a content manager modifies content to be delivered to mobile users and in order to do this it subscribes to profile topics and a selector sub-component maintains a dynamic model of what constitutes relevant content for a particular user, wherein this

Art Unit: 2163

model is modified on-the-fly to reflect the dynamic changes to users' profiles as they move through time and space, and so forth, and therefore the content subscriptions reflect the relevance of particular topics, Johnson-Watt).

Claims 2, 12, and 22:

Claims 2, 12, and 22, Johnston-Watt teaches wherein said at least one domain-specific ontology model for a particular presence application comprises a Unified Markup Language (UML)-based data model (paragraph [0053], wherein the adaptive technology framework, i.e. ATF object model is specified using an UML, Johnston-Watt).

Claims 3, 13, and 23:

Claims 3, 13, and 23, Johnston-Watt teaches wherein said at least one domain-specific ontology model for a particular presence application comprises an Extended Markup Language (XML)-based data model (paragraph [0053], wherein the domain metadata is specified in industry standard from using extended markup language (XML), Johnston-Watt).

Claims 4, 14, and 24:

Claims 4, 14, and 24, Johnston-Watt teaches wherein said at least one domain-specific ontology model for a particular presence application comprises a semantic net data model (paragraph [0054], wherein use rules base semantic mark up in order to publish content on domain specifics topics, and so forth, Johnson-Watt)

Claims 5, 15, and 25:

Claims 5, 15, and 25, Johnston-Watt teaches wherein said at least one domain-specific ontology model for a particular presence application comprises a General

Art Unit: 2163

Markup Language (GML)-based data model (paragraphs [0054] and [0055], wherein <OrgID>.CALENDAR.<GroupID>.<UserID> is defined, and so forth, and wherein this is interpreted to be the GMI, wherein GMI originated the use of <> and / for the markup and is still used for document applications, Johnston-Watt).

Claims 6, 16, and 26:

Claims 6, 16, and 26, Johnston-Watt teaches wherein said at least one domain-specific ontology model for a particular presence application comprises a data model based on a semantic software application selected from the group consisting of a Resource Description Framework (RDF) application, an Ontology Inference Layer (OIL) application, an Ontology Web Language (OWL) application, a Semantic Web Initiative (SWI)-compliant application, and a Meta Object Framework (MOF) application (paragraph [0062], wherein the adaptive delegation controller layer is made up of a number of sub-components, which is interpreted to be the ontology interference layer; paragraph [0052], wherein emerging web services is defined and [0054], wherein they use rules base semantic markup in order to publish content on domain specific contents, which is interpreted to be the semantic web; and paragraph [0053], wherein paragraph [0053], wherein the resource definition facility documents as defined by W3C, is interpreted and equivalent to resource description framework and together with a domain specific topic hierarchy these can be thought of as constituting a primitive ontology: taxonomy+set of axioms/rules and the ATF is constructed using a combination of generic ontologies such as Dublin Core and industry specific ontologies such as IBM's Insurance Application Architecture, which is interpreted to be the ontology web language and meta object framework, Johnston-Watt)

Art Unit: 2163

Claims 7, 17, and 27:

Claims 7, 17, and 27, Johnston-Watt teaches wherein said structure operable to reference a domain-specific ontology model comprises a presence client software module operable to invoke a Universal Resource Locator (URL) path associated with said ontology depository including said domain-specific ontology model (paragraph [0023], wherein the term "content" encompasses application or domain specific data and The term also incorporates an abstract of content or a link to content, wherein the link to content is interpreted to be the URL, Johnston-Watt).

Claims 8, 18, and 28:

Claims 8, 18, and 28, Johnston-Watt teaches wherein said structure associated with said presence entity is operable to dynamically reference a domain-specific ontology model of said ontology depository (paragraphs [0050], [0052], [0053], wherein an ontology represents the data model rules that determine how the ATF modifies the information and services delivered to the mobile device and so forth and wherein the ATF is constructed using a combination of generic ontology's such as IBM's insurance application architecture, and wherein domain metadata is specified and so forth, and [0059], respectively, Johnston-Watt).

Claims 9, 19, and 29:

Claims 9, 19, and 29, Johnston-Watt teaches wherein said structure associated with said presence entity is operable to effectuate a static reference to a domain-specific ontology model during said structure's compile time (paragraph [0056], respectively, Johnston-Watt).

Claims 10, 20, and 30:

Claims 10, 20, and 30, Johnston-Watt teaches wherein said particular presence application is selected from the group consisting of transportation applications, shipping and delivery applications (paragraphs [0061], wherein enables the content manager to interface to the preferred delivery mechanism, Johnston-Watt), premises security monitoring applications, private enterprise applications (paragraph [0023], respectively, Johnston-Watt), government agency applications, and instant messaging applications (paragraph [0026], wherein this is a set of distributed server components that implements rule based selection; paragraph [0059], respectively, Johnston-Watt).

Examiner's Response to Applicant Arguments

Applicant's arguments prior art does not disclose the idea of the ontology being located at some remote location in the Internet and the presence system using a reference to find that location.

Applicant argues an amended claim language which was not presently defined within the original office mailed out on 12/01/2006, Therefore, in response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., idea of the ontology being located at some remote location in the Internet and the presence system using a reference to find that location) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

However, Johnston-Watt does teach the newly amended claim, which cites “an ontology depository having at least one domain-specific ontology model **accessible via the internet** for a particular presence application;” and

“presence entity having a structure operable to reference a domain-specific ontology model of said ontology depository **via the internet** for customizing a presence client software module associated with said presence entity, whereby said presence entity becomes operable to engage in a particular presence application relating to said domain-specific ontology model”.

See paragraphs [0050] and [0051], wherein The ATF server-side components are illustrated in Figure 4, where there are five distinct logical components: Foundation, Adaptive Content Engine (ACE), Adaptive Delegation Controller (ADC), a set of adapters which provide the interface to and from the outside world, and a meta architecture which holds one or more ontologies relating to a business domain, wherein an ontology represents the data model and business rules that determine how the ATF modifies the information and services delivered to the mobile device in accordance with prevailing conditions, wherein this is interpreted to be equivalent to “an ontology depository having at least one domain-specific ontology model”; and paragraph [0052], wherein the ATF supports protocols with the emerging web services and so forth, wherein emerging web services is equivalent to the internet, in which a web service is any piece of software that makes itself available over the internet and uses a standardized XML messaging system, respectively, wherein this is overall equivalent to “an ontology depository having at least one domain-specific ontology model **accessible via the internet** for a particular presence application”; and Referring to “presence entity having a

Art Unit: 2163

structure operable to reference a domain-specific ontology model of said ontology depository **via the internet** for customizing a presence client software module associated with said presence entity, whereby said presence entity becomes operable to engage in a particular presence application relating to said domain-specific ontology model, Refer to paragraph [0059], wherein it modifies the content for delivery to the mobile device based on information from the user's profile and business rules defined in the business domain ontology that is applicable for the user's place, time and role, wherein a content manager modifies content to be delivered to mobile users and in order to do this it subscribes to profile topics and a selector sub-component maintains a dynamic model of what constitutes relevant content for a particular user, wherein this model is modified on-the-fly to reflect the dynamic changes to users' profiles as they move through time and space, and so forth, and therefore the content subscriptions reflect the relevance of particular topics.

Prior Art of Record

(The prior are made of record and not relied upon is considered pertinent to applicant disclosure)

| 3. Trossen et al. | (US Publication No. 2004/0260749) |

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

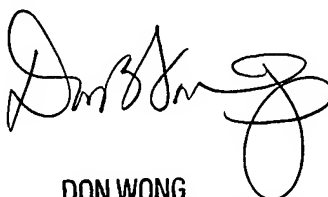

Point of Contact

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Helene Rose whose telephone number is (571) 272-0749. The examiner can normally be reached on 8:00am - 4:30pm Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Don Wong can be reached on (571) 272-1834. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
